

Microsoft Dynamics GP

Dongara Pellet Plant

Solution Overview

Industry

Waste Management

Application

Microsoft Dynamics GP 10.0

Solutia SDO

Suite 300
2916 South Sheridan Way
Oakville, ON
L6J 7J8
(905) 829-8210

Partners

Dascan

Introductions

The Dongara Pellet Plant is an operating waste processing facility that is permitted to receive municipal waste from the Greater Toronto Area and the regions of York, Durham and Peel and process that waste into the Dongara trademarked EnerPax+ fuel pellets.

The Dongara product, EnerPax+, has an energy content of approximately 12,000 BTUs, similar to medium grade coal, but is a significantly cleaner fuel and is resistant to water, making it easy to ship and store.

Background

Dongara was looking for a back office solution to handle their core financials and be able to integrate with their facility management software, Wonderware.

Once this first plant was proven viable there are plans to expand. This required the financial/operational solution to be scalable and easy to deploy.

Project Highlights

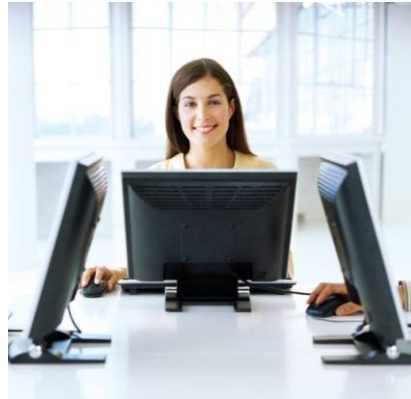

- Deployed core functionality for general ledger, purchasing, payables and receivables in a short timeframe.
- Transitioned financial operations from the parent company to onsite staff.
- Established that integration between the facility management software; Wonderware and Dynamics GP would help streamline future processes.
- **Microsoft Dynamics GP was implemented on time and under budget.**

*"We measure our
success by the
success of **OUR**
clients"*

Aims & Objectives

- Implement core Microsoft Dynamics GP functionality in short timeframe
- Configure integration with facility management software, Wonderware

Challenges

Implement a solution for a facility that was already under construction and transition financial reporting from the parent company in less than a month.

Prepare for integration with the facility management software; Wonderware, without having all the final requirements.

Approach

The first step was to confirm the business requirements with the client and ensure no customizations were necessary. Once the core functionality was configured there were minor modifications to several reports.

Next the staff was trained and the final preparations were made for cutover. Dongara was operational in short order with minimal support required from Solutia.

Integration with their facility management software would be accomplished using a Microsoft certified third party product. This product was chosen because it provides the client with an easy to use interface with minimal configuration. It provides integration to Dynamics GP using either spreadsheets or database connections that can be scheduled.

Successes

Implementation proceeded smoothly, with minimal need for post-go-live support.

Client is pleased with the overall solution and there were no significant post-implementation issues.

Project was delivered in less than four weeks and was under budget.
